Art Unit: 3764

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-18, 29-44, 49-53, drawn to a means to selectively vary a preset resistance, classified in class 482, subclass 8.
- II. Claims 19-28, drawn to means to impart an inertial quality to a resistance, classified in class 434, subclass 247.
- III. Claims 45-48, drawn to an analog readout, classified in class 601, subclass 23.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II are III related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention III has separate utility such as an analog meter. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

A telephone call was made to William Lightbody on 5/14/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
